This is an astronomical image, likely a radio continuum or infrared map, showing a galaxy. The image is centered on a bright, yellow-green point source, which is the core of the galaxy. Surrounding this core is a diffuse, blue emission that forms a complex, irregular shape. The emission appears to be concentrated in the central region and extends outwards in a somewhat circular pattern. A white crosshair is overlaid on the image, with the vertical line passing through the central bright spot and the horizontal line intersecting it. The background is black.
