

ABA:67978773

CA1

This is an axial PET scan of the brain. The image shows a cross-section of the brain with a color scale from blue (low uptake) to yellow (high uptake). A prominent area of increased uptake is visible in the left hemisphere, specifically in the posterior region, likely involving the occipital lobe. The rest of the brain shows relatively low uptake, with some minor background activity. A vertical line is drawn through the center of the brain, and a horizontal line is drawn across the middle of the image.
