SCN

The image displays two coronal brain sections, likely from a rodent, showing the location of the suprachiasmatic nucleus (SCN). The brain sections are stained in a uniform blue color, indicating the presence of the SCN. The sections are positioned symmetrically on either side of a central vertical line, which serves as a midline reference. The staining is dense and covers a significant portion of the brain's cross-section in each hemisphere. The background is black, making the blue-stained brain tissue stand out prominently.
