Tg

The image displays a fluorescence microscopy scan of a biological specimen, likely a cell or tissue section. The specimen is represented by a blue, irregularly shaped area against a black background. A prominent, bright yellow-green spot is located near the center of the specimen, slightly to the left of the vertical center line. Several smaller, dimmer blue spots are scattered in the lower-left quadrant of the specimen. A white crosshair is overlaid on the image, with the vertical line passing through the center of the bright spot and the horizontal line passing through the center of the specimen.
