

ABA : 68546293

S0

This is an axial PET scan of the brain. The image shows a cross-section of the brain with a central vertical line representing the midline. A horizontal line is drawn across the image, intersecting the vertical line. The brain tissue is mostly dark blue, indicating low uptake. There is a prominent, bright yellow-green spot located in the posterior region, just below the horizontal line and to the right of the vertical line. This spot represents a focal area of increased uptake, likely indicating a pathological process such as a tumor or inflammation. The text 'ABA : 68546293' is located in the top left corner, and 'S0' is located in the bottom left corner.
