This is a PET scan image of a human brain, likely showing metabolic activity. The image is a coronal slice, with the brain's midline visible in the center. The scan is divided into three vertical sections by two vertical white lines. The background is dark, and the brain tissue is represented by various shades of blue. There are several distinct spots of higher metabolic activity, indicated by brighter colors. A prominent spot in the lower-left quadrant (occipital region) shows a gradient from blue to yellow to red. A smaller, similar spot is visible in the lower-middle section. Other smaller blue spots are scattered in the upper-left and central areas. The text 'ABA : 68667898' is located at the top left, and 'S0' is at the bottom left.
