Tg

The image displays a fluorescence microscopy scan of a biological specimen, likely a plant or animal tissue, against a black background. The specimen is outlined in a light blue color. A prominent, localized signal is visible on the left side of the specimen, appearing as a vertical strip of color that transitions from red at the top to yellow and green at the bottom. The rest of the specimen shows a uniform, low-intensity blue signal. A white crosshair is overlaid on the image, with the vertical line passing through the center of the specimen and the horizontal line passing through the center of the localized signal.
