

ABA: 69133761

M

This image shows a fluorescence microscopy view of a cell, likely a yeast, under ABA treatment. The cell is divided into four quadrants by a vertical and a horizontal white line. The background is dark, and the cell's internal structure is visible in shades of blue. A bright, multi-colored spot (yellow, green, and blue) is located at the top center, near the vertical line. Another bright blue spot is located at the bottom center, near the horizontal line. The text 'ABA: 69133761' is in the top left, and 'M' is in the bottom left.
