SCN

The image displays two coronal brain slices, likely from a rodent, showing the location of the suprachiasmatic nucleus (SCN). The brain tissue is highlighted in a solid blue color, indicating the specific region of interest. The slices are positioned symmetrically on either side of a central vertical line, which serves as a midline reference. A horizontal line is also present, intersecting the vertical line at the center of the brain slices. The background is black, providing high contrast for the blue brain tissue.
