VA/VL

This image is an axial brain scan, likely an fMRI or PET scan, showing a cross-section of the brain. The brain is rendered in shades of blue against a black background. A vertical white line runs down the center, representing the midline. A horizontal white line runs across the middle, representing the slice level. In the lower-left quadrant (representing the left hemisphere of the brain), there is a distinct, bright blue spot, indicating a focal area of activation or metabolic activity. The rest of the brain shows a more uniform, dimmer blue color.
