SCN

The image displays two coronal brain sections, likely from a rodent, showing the location of the suprachiasmatic nucleus (SCN). The sections are presented in a side-by-side comparison. The left section shows a blue-stained area, indicating the presence of the SCN. The right section shows a similar blue-stained area, also indicating the presence of the SCN. The staining is localized to a specific region in the anterior part of the brain. The sections are separated by a vertical white line, and a horizontal white line is visible at the bottom of the image.
