

ABA: 69734446

A posterior

The image displays a cross-sectional scan of a brain, likely a PET or SPECT scan, with a color scale ranging from blue (low activity) to red (high activity). The brain's anatomical structure is visible, including the cerebral hemispheres and the central sulcus. A prominent, localized area of high activity is visible in the posterior region, specifically in the lower-left quadrant of the image. This area is colored in shades of yellow, orange, and red, indicating a significant concentration of the tracer. The rest of the brain shows relatively low activity, represented by blue and dark blue colors. A white crosshair is overlaid on the image, with the vertical line passing through the center of the brain and the horizontal line passing through the level of the high-activity region.
