SCN

The image displays two coronal brain sections, likely from a rodent, showing the location of the suprachiasmatic nucleus (SCN). The sections are presented in a side-by-side comparison. The left section shows a very faint, localized blue-stained spot in the center, representing the SCN. The right section shows a much more intense and widespread blue staining throughout the brain tissue, indicating a higher level of expression or a different experimental condition. A white crosshair is overlaid on the image, with the vertical line separating the two sections and the horizontal line passing through the center of the brain sections.
