

ABA:70227872

Pn

The image displays two coronal slices of a brain, likely from a PET or SPECT scan, given the grayscale intensity and the presence of a focal hot spot. The brain is shown in a coronal view, with the top of the head at the top of the image. The left hemisphere (viewer's right) shows a distinct, bright, circular area of increased signal intensity, indicating a focal lesion or abnormality. The rest of the brain tissue shows a more uniform, lower-level signal. The image is divided into four quadrants by a vertical and a horizontal white line. The text 'ABA:70227872' is in the top-left quadrant, and 'Pn' is in the bottom-left quadrant.
