A posterior

A posterior brain scan showing a blue highlighted region. The image is a grayscale brain scan with a blue overlay. The blue area is concentrated in the posterior region, specifically in the occipital lobe. There are two distinct bright spots: one smaller spot in the upper part of the occipital lobe and one larger, more intense spot in the lower part, near the occipital pole. The rest of the brain scan is in grayscale. A white crosshair is visible, with the vertical line passing through the center of the brain and the horizontal line passing through the lower part of the brain.
