VPM/VPL

This is an axial PET scan of the brain. The image shows a cross-section of the brain with a color scale from blue (low activity) to yellow (high activity). A prominent focal area of increased activity is visible in the left hemisphere, specifically in the region of the VPM/VPL. The rest of the brain shows relatively low activity, with some diffuse blue and light blue areas. A white crosshair is overlaid on the image, with the vertical line passing through the center of the focal area.
