

ABA:70526028

Tg

This image shows a fluorescence microscopy view of a zebrafish embryo at the Tg stage. The embryo is stained with a fluorescent marker, appearing as a blue, irregularly shaped mass against a black background. A white crosshair is overlaid on the image, with the vertical line passing through the center of the embryo and the horizontal line passing through the middle. Two bright spots of cyan fluorescence are visible in the upper-left quadrant of the embryo, indicating the presence of ABA. The text 'ABA:70526028' is located in the top-left corner, and 'Tg' is in the bottom-left corner.
