

ABA: 70542941

ME

The image displays two coronal slices of a brain, likely from a rodent model, showing a localized blue signal in the medial temporal lobe region. The signal is visible in both the left and right hemispheres, indicating a bilateral effect. The signal is most prominent in the lower part of the brain, consistent with the location of the medial temporal lobe. The rest of the brain appears dark, suggesting no significant signal elsewhere. The text 'ABA: 70542941' is located in the top left corner, and 'ME' is in the bottom left corner.
