VMH

This image shows a coronal section of a brain with a fluorescence signal. The signal is localized to a small, bright spot in the upper-left quadrant of the image, which is labeled as the VMH (ventral medial hypothalamus) region. The rest of the brain section shows a uniform, low-level blue fluorescence. A vertical white line is positioned to the right of the bright spot, and a horizontal white line is positioned below it, intersecting at the center of the brain section.
