Tg

The image displays a fluorescence microscopy view of a biological specimen, likely a cell or tissue section. The specimen is stained with a blue fluorescent marker, resulting in a large, irregularly shaped blue area. Two distinct, bright spots are visible: one is located at the top center, and the other is positioned in the lower-left quadrant. A white crosshair is overlaid on the image, with its vertical line passing through the top spot and its horizontal line passing through the lower-left spot. The background is black.
