Tg

The image displays a fluorescence microscopy scan of a plant specimen, likely a leaf or stem cross-section. The specimen is represented by a large, irregularly shaped blue area against a black background. Two distinct, bright blue spots are visible in the lower half of the specimen, one on the left and one on the right, indicating specific areas of interest or high fluorescence intensity. A white crosshair is overlaid on the image, with a vertical line and a horizontal line intersecting at the center of the specimen.
