

ABA: 71763792

SCN

The image displays two coronal brain sections, likely from a rat, showing the location of the suprachiasmatic nucleus (SCN). The sections are stained with a blue fluorescent marker, ABA, which is used to visualize specific neurons or structures. The left section shows a small, bright blue spot in the upper part of the SCN, while the right section shows a more diffuse, uniform blue staining throughout the SCN. The sections are separated by a vertical white line, and a horizontal white line is visible at the bottom of the image.
