A fluorescence microscopy image of a brain section, likely a coronal slice. The image shows a complex pattern of blue and cyan signals against a black background. The signal is distributed across the brain's structure, with a prominent horizontal band of cyan signal in the center. The overall appearance is that of a brain slice with specific regions highlighted in blue and cyan. A white grid is overlaid on the image, consisting of a vertical line and a horizontal line that intersect at the center of the brain slice.
