

ABA: 72283510

SCN

The image displays two coronal sections of a brain, likely from a rodent, stained for the Suprachiasmatic Nucleus (SCN). The sections are positioned symmetrically on either side of a vertical white line. The SCN is highlighted in a bright blue color, appearing as two distinct, roughly circular regions. The surrounding brain tissue is dark, providing a high contrast for the blue-stained areas. The text 'ABA: 72283510' is located in the top left corner, and 'SCN' is located in the bottom left corner.
