

ABA: 73615782

Tg

The image displays a fluorescence microscopy view of a zebrafish embryo at the Tg stage. The embryo is stained with a fluorescent marker, appearing as a bright blue, somewhat irregular shape against a black background. A white crosshair is overlaid on the image, with the vertical line passing through the center of the embryo and the horizontal line passing through its midline. Two distinct, bright blue spots are visible, one in each of the upper quadrants defined by the crosshair, representing the expression of the ABA gene. The text 'ABA: 73615782' is located in the top-left corner, and 'Tg' is in the bottom-left corner.
