

ABA: 74819235

VMH

The image displays two coronal brain slices, likely from a rodent, showing blue fluorescence. The fluorescence is concentrated in the ventral medial hypothalamus (VMH) region, which is highlighted by a white crosshair. The left slice shows a more diffuse, curved band of fluorescence, while the right slice shows a more localized, bright spot. The text 'ABA: 74819235' is located in the top left corner, and 'VMH' is located in the bottom left corner.
