Tg

The image displays a fluorescence microscopy scan of a biological specimen, likely a pair of cells or a small organism, against a black background. The specimen is illuminated with a blue light, creating a diffuse glow. Two distinct, bright spots of cyan and yellow-green fluorescence are visible, one on the left and one on the right, positioned near the center of the specimen. A white crosshair is overlaid on the image, with the vertical line passing through the two bright spots and the horizontal line passing through the center of the specimen. The overall shape of the specimen is roughly heart-shaped or butterfly-shaped.
