VA/VL

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale from blue (low activity) to yellow (high activity). A vertical white line is drawn through the center of the brain, and a horizontal white line is drawn across the middle. A focal area of increased activity, shown in yellow, is visible in the right hemisphere (viewer's right), located in the posterior region. The rest of the brain shows relatively low activity, represented by blue and cyan colors.
