

ABA: 76003447

A posterior

The image displays a cross-sectional brain scan, likely an SPECT or PET scan, with a color scale ranging from dark blue (low activity) to bright yellow/white (high activity). A prominent focal area of increased activity is visible in the left posterior region, appearing as a bright yellow-green spot. The rest of the brain shows relatively uniform, low-level activity represented by dark blue. A vertical white line is positioned to the right of the focal area, and a horizontal white line is positioned below it, intersecting at the bottom center of the image.
