

ABA:77280574

CA1

An axial PET scan of the brain. The image shows a cross-section of the brain with a color scale from blue (low uptake) to yellow/red (high uptake). A prominent, localized area of high uptake is visible in the left hemisphere, specifically in the region of the basal ganglia. The rest of the brain shows relatively low, uniform uptake. A vertical white line is drawn through the center of the brain, and a horizontal white line is drawn across the middle of the image.
