VMH

A fluorescence microscopy image of a brain section, showing the VMH (ventral medial hypothalamus) region. The image is split vertically into two halves, likely representing a control and an experimental condition. The left half shows a diffuse, low-intensity blue signal, while the right half shows a more intense and localized blue signal, indicating a specific area of interest. A vertical white line separates the two halves, and a horizontal white line is visible near the bottom. The text 'ABA:77340492' is in the top left, and 'VMH' is in the bottom left.
