

ABA:77371813

SPa ventral

The image displays two panels of a brain scan, likely a PET or SPECT scan, showing functional activity. The left panel shows a coronal section of the brain, and the right panel shows a sagittal section. Both panels exhibit a blue-to-yellow color scale, indicating varying levels of activity. The left panel shows a distinct, curved band of activity along the lateral edge of the brain. The right panel shows a similar band of activity, but with a more intense, yellowish-green region in the upper part of the brain. A vertical line separates the two panels, and a horizontal line is visible at the bottom of the image.
