S0

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and yellow/red represents high metabolic activity. A prominent, focal area of increased uptake (yellow/red) is visible in the right frontal lobe, near the anterior cingulate cortex. There are also smaller, less intense areas of uptake in the bilateral frontal lobes and the posterior horns of the lateral ventricles. The image is overlaid with a white grid consisting of a vertical line and a horizontal line intersecting at the center.
