OB anterior

A fluorescence microscopy image of a brain section. The image is dark with two prominent, bright blue spots. A white crosshair is overlaid on the image, with the vertical line passing through the center of the spots and the horizontal line passing through the middle of the spots. The spots are located in the center of the image, one slightly to the left and one slightly to the right of the vertical line. The spots have a bright, concentrated center that fades into a more diffuse blue glow. The background is black.
