

ABA: 79541439

A posterior

The image displays a cross-sectional view of a brain, likely from a PET or SPECT scan, with a color scale ranging from black (low activity) to blue (high activity). A prominent, localized blue spot is visible in the lower-left quadrant of the brain, indicating a focal area of increased metabolic or perfusion activity. The rest of the brain shows a relatively uniform, low-level blue color. A white crosshair is overlaid on the image, with the vertical line passing through the focal spot and the horizontal line passing through the bottom of the brain slice.
