VMH

A coronal brain scan showing a blue-colored region of activation in the ventral medial hypothalamus (VMH). The brain is shown in a coronal cross-section, with a vertical line indicating the midline and a horizontal line indicating the level of the VMH. The activation is localized to the VMH region, which is situated in the lower part of the brain, near the base of the hypothalamus. The rest of the brain is shown in a dark, almost black color, indicating no significant activation.
